

Food First

Eat and drink your way to better health

This leaflet can help you to increase your calorie and protein intake if you have a poor appetite or have lost weight. Following the guidance to include nourishing snacks and drinks in your diet can help stop further weight loss or start to increase your weight.

Each day you should aim to have the following on top of your normal diet;

- 1 Food boosters ([page 4](#))
- 2 High energy snacks ([page 5](#))
- 3 Nourishing drinks ([page 5/6](#))

You should weigh yourself weekly and track your progress using the table below.

You should notice whether these changes have helped your weight after four weeks. If after this time you still have concerns, contact your GP practice for advice.

Weight Record	
Date	Weight

General hints and tips

- Always use full fat and full sugar products (if you have diabetes please seek advice from your diabetes specialist)
- Try to eat little and often, aim for every 2-3 hours
- If you are unable to manage a meal, try to have a nourishing drink with a snack instead
- Fresh air and gentle exercise before meals may help to stimulate your appetite
- Relaxing and enjoying meals in company may help to increase your appetite
- If a large plate of food is overwhelming, try a smaller plate; you can always go back for more
- Freeze extra portions so you have meals available without needing to cook every day

Skimmed milk powder*:

Skimmed milk powder, available in most supermarkets, is a cheap and effective way to increase your calorie and protein intake:

- Add 4 tablespoons of skimmed milk powder to 1 pint of full cream milk and mix well. This can be used throughout the day in place of your usual milk
- Add the skimmed milk powder to soups, mashed potato, white sauces, porridge, milky puddings, creamy dishes e.g. pasta bakes, fish pie, carbonara

*If you do not eat or drink dairy products try using soya milk fortified with soya milk powder instead

Food boosters

The list of foods below provide approximately 100 calories each. They are examples of boosters that can be added to your normal meals to promote weight gain. Aim for at least three boosters per day.

Savoury options	Can be added to
A small matchbox-sized piece (30g) of Cheddar cheese	Toast, pasta, mashed potato, soup, salads, baked potatoes, beans, minced beef/quorn dishes, crumpets, scones, chips.
1 tablespoon of peanut butter	Milkshake, toast, crumpets, sandwiches.
1 tablespoon of full fat mayonnaise	Salad, mashed potato, baked potato, chips, sandwiches.
1 tablespoon of oil	Salads, mashed potato, roast potatoes, chips, roasted veg,
2 cubes of butter	Bread, potatoes, crumpets, scones, vegetables.
2 tablespoons of pesto	Pasta, salad, vegetables, pizza, tomato based sauces, soups.
2 tablespoons of salad cream	Salad, mashed potato, baked potato, chips, sandwiches.
2 tablespoons of hummus	Vegetable sticks, bread sticks, crisps, salads, baked potatoes.

Sweet options	Can be added to
1 heaped tablespoon of sugar	Cereals, porridge, desserts.
1 small pot of full fat yoghurt	Fruit, pancakes, desserts, cakes.
1½ tablespoons of double cream	Porridge, desserts, milky drinks, cakes, fruit.
2 tablespoons of chocolate sauce	Porridge, desserts, milky drinks, fruit, pancakes
2 tablespoons of golden syrup	Porridge, desserts, cakes, fruit.
2 tablespoons of lemon curd	Porridge, desserts, cakes, fruit, sandwiches, toast
2 tablespoons of condensed milk/ evaporated milk	Porridge, desserts, milky drinks, cakes, fruit.
2 tablespoons of honey	Porridge, desserts, drinks, cakes, fruit, yoghurt.
2 scoops of ice cream	Fruit, pancakes, desserts, cakes.

High energy snacks

Try to have two snacks each day. Avoid having them near meal times in case this reduces your appetite for main meals.

- A small handful of nuts
- A small handful of dried fruit
- Chocolate mini roll
- 1 banana
- Half a croissant
- 1 shortbread finger
- 1 bag of crisps
- 1 slice of malt loaf
- Half a hot cross bun with butter
- 2 Jaffa Cakes
- 3 cream crackers
- 3 squares of milk chocolate
- 150ml of fortified milk
- 200ml of orange juice
- Two fingers of KitKat
- Five jelly babies or wine gums
- A serving of Angel Delight
- A 30g piece of cheese
- A hardboiled egg

Nourishing drinks

Making the most of the **fluid** you drink is an easy way of getting extra **energy** and **protein** throughout the day.

Aim for three nourishing drinks each day. Try to avoid having these near meal times. Having a milky drink before bed is thought to aid sleep.

On the next page are some recipes for you to try.

Nourishing Drink Recipes

Fruit Smoothie

- 150ml carton fruit juice
- 1 mashed banana
- 3-4 tablespoons of tinned peaches in syrup
- 2 teaspoons of honey/maple syrup or sugar

Approx 260kcal and 2g protein

Iced Coffee Calypso

- 200ml fortified milk
- 1-2 teaspoons instant coffee powder
- 2 teaspoons double cream or 1 scoop ice cream (iced coffee)
- sugar to taste

Approx. 194kcal and 8g protein

Tip: for hot alternative heat milk and leave out ice cream.

Banana Milkshake

- 200ml fortified milk
 - 1 small banana mashed*
 - 1-2 teaspoons of sugar (or honey/ maple syrup/ caramel sauce)
 - 60g or 1 scoop vanilla ice cream
- *or pieces of fruit/berries*, (e.g. 80g)

Approx. 449kcal and 20g protein

Chocolate Indulgence

- 200ml fortified milk
- 1-2 tablespoons drinking chocolate
- 2 tablespoons of double cream
- 1 generous scoop of ice cream

Approx. 300kcal and 17g protein

Tip: for hot alternative heat milk and leave out ice cream (*approx. 230kcal and 17g protein*)

There are also many high calorie or high protein drinks available in supermarkets and pharmacies if you are unable to prepare a homemade nourishing drink or prefer something that is ready-to-drink.

Hydration

Keeping hydrated is essential for healthy bodily function. You should try to drink 1.6 – 2 litres of fluid per day (this is around 8-10 glasses).

Symptoms of not drinking enough (dehydration) can include:

- Headache
- Thirst
- Dry mouth, lips or both.
- Tiredness
- Confusion
- Dizziness
- Low blood pressure
- Constipation
- Dry or loose skin
- Urinary tract infections

Keeping an eye on the colour of your urine can be a helpful way of making sure you are hydrated:

- Remember '1-3 is healthy wee, 4-8 you must hydrate!'

Tips for staying hydrated:

- All fluids count e.g. water, tea, coffee, milk, squash, and fruit juice.
- Foods that have a high fluid content can also help you stay hydrated, including fruit, vegetables, jelly, ice cream, soup, milky puddings
- In some circumstances, you may need to drink more, such as when you have a high temperature or wound, during hot weather or after exercise
- Some people who have incontinence don't drink as much as they should. However it is still important to remain hydrated. If you feel this is difficult for you speak to your GP practice
